NATIONAL VIOLENT DEATH REPORTING SYSTEM (NVDRS)

Violent deaths are a serious public health problem in the United States.

- Every hour, nearly six Americans die from violence-related injuries and **a total of 57,000** people die by homicide and suicide annually.
- Violent deaths **cost \$77 billion** in annual medical and work-related costs.
- U.S. males aged 15-19 **are five times more likely** to die from violence than those in other OECD countries.

Data to inform policy: *Violent deaths are preventable.* To obtain the data necessary to track violent deaths and eventually develop prevention strategies, CDC administers the NVDRS.

- NVDRS is a **state-based surveillance system that centralizes information** from a variety of state and local agencies and sources – medical examiners, coroners, police, crime labs, and death certificates— to **better characterize and monitor violent deaths.**
- NVDRS provides tools necessary for public health officials and policymakers to **design and implement targeted prevention efforts.**

The 2014 World Health Organization Global Status Report on Violence Prevention calls on Congress to strengthen data collection on violent deaths from multiple sources and promote linkage of data to provide more complete and comprehensive information to inform prevention efforts.

NVDRS has been essential in identifying problem areas and developing successful prevention efforts in **New Mexico:**

- The **New Mexico-VDRS** (NM-VDRS) suicide data is currently being used to inform a **comprehensive state suicide prevention plan.** The suicide prevention plan will be a central component of the combined New Mexico Substance Abuse Prevention and Treatment and Community Mental Health Block Grant application to the Substance Abuse and Mental Health Services Administration (SAMHSA).
- In 2004, **New Mexico** ranked second highest in the nation (tied with Nevada) for rate of violent deaths. As a result, the New Mexico Department of Health published a **comprehensive report** on violent deaths using data from **NM-VDRS.** The report presented information learned from NM-VDRS and identified additional information needed to better target suicide prevention efforts.
- **NM-VDRS** data has allowed public health officials identify **regional differences** in suicide and homicide rates.

The National Violence Prevention Network supports the President's request for nationwide expansion of NVDRS by providing an increase of \$9 million to the CDC Injury Center.

CONGRESSIONAL ASK:
SUPPORT FY2017 FUNDING LEVEL OF \$25.0M FOR NVDRS
